DETAILED ACTION

Allowable Subject Matter

Claims 1-5 and 9-38 are allowed.

The closest prior art to the instant invention is Vig (U.S. Patent No. 4,602,899). Vig teaches a cutting tool having a cutter plate (3), screw (17) for pressing the bottom of the insert against a support surface (13) of the tool as well as lateral wall sections (Col. 9, lines 47-55), springy pin (41), an adjustment wedging element (37) {arranged in a receptacle defines by guide edges (38 & 39)} which can be actuated and moved in longitudinal direction by means of a pressure screw (28), and stop surface (35) forming the adjustable stop (15) for the cutting insert (Col. 10, lines 8-10 & Col. 12, lines 38-40) (see figures 1 and 2). Vig also teaches adjustment wedge being actuated as a result of set screw (28) being arranged to contact and slanted surface (34) of the actuating wedge (i.e. acting at an angle with respect to adjustment wedge surface) (see figure 2). However, there is no suggestion in Vig's teaching to provide an adjustment wedge and an actuating wedge that are formed as recesses on a single-piece double wedge pin..
